

Dear all,

I have received an e-mail from Aria Soho, the test-beam manager at FTBF and we have green light to produce a Technical Scope of Work (TSW, former MoU) for our common project. I will take the MoU that I have started earlier and change the expressions accordingly (the form is pretty much the same). I will then fill the TSW with your input you gave me earlier and submit it to you for review and after to the Fermilab authorities.

Here is Aria's input:

-----

Hi Klaus,

It looks like everything will work out well. The planning office has agreed, you guys only need to write one TSW for all 5 detectors. You can find the Template here:

<http://www-ppd.fnal.gov/FTBF/TSW/write.html>

Once you submit a first draft, You'll be given an experiment number, and then I can pencil you into the schedule. There is one other experiment I know of who is considering October, but they have not yet submitted a plan, and it's possible you could both have some part of October. (I believe they are only interested in One week)

I look forward to hearing from you.

~Aria Soha
