

Graphene Target R&D Proposal

Graphene Labs would like to do some pro-bono research on developing graphene targets

- Advantages:
 - possibly better resistant to beam damage longer life
 - More ridged possibly less twisting (maybe some ways to build in frame to avoid twisting?)
 - Possibly better aspect ratio (thinner and more regular strands)

We are going to support this effort:

- Supplying Materials
- Help draft proposal for use of CFN Lab
- Letter of support
